

1) Document installation steps and environment variables

To install JDK on macOs I followed these steps:

- i) Downloaded the .dmg installer file for macOs on the official Oracle Java website under the Downloads section.
- ii) Once the .dmg file is downloaded, double-clicked it to open the disk image.
- iii) Inside the opened disk image, double click the .pkg installer file to launch the Java installation wizard.
- iv) Click install to begin the installation.
- v) The installation completes.
- vi) Open the terminal and type the command java -version and press enter to check the version installed.
